

ATTENTION!! My husband is a cross country truck driver who has a XM sat radio in his truck. This has been a life saver for him with the traffic & weather reports. The new HOS rules make it imperative that truckers use their work time efficently, with weather reports & traffic info, he can plan his routes & stops to allow for the least time lost!! The topic of highway safety has been in the forefront for months, why would you consider stopping something that allows drivers of all kinds to know when they are approaching bad weather or hazardous road conditions? Please DO NOT ALLOW this to be taken away from the American public!
